

FEATURE KEY

- 1 **Global top bar**

The same chrome as every page — menu, UAT environment tag, profile, and light / dark toggle — so search is always one field away.
- 2 **Search**

One box queries across the whole system at once. Enter a name, policy, carrier, or keyword and hit **Search**.
- 3 **Entity result tabs**

A live count of matches per type — **All**, **Contacts**, **Employees**, **Cases**, **Contracts**, **Opportunities**, **Carriers**, **Documents**. Click one to filter the results to just that entity.
- 4 **Entity Type filter**

A checklist of all 12 entity types with counts, plus **Deselect All** — fine-grained control over what the results include.
- 5 **Status**

An accordion: **Open** expands to real sub-statuses (Approved, Issued, Pending 1035, ...); **Closed** holds the rest. Checking one filters the results.
- 6 **Carrier**

Narrow results to a specific carrier without leaving the search.
- 7 **Active filters**

Every applied status or type shows as a removable chip, with **Clear all** to reset in one click.
- 8 **Results**

Matches are grouped by entity — a Contact card, Contract rows, Cases, and so on — with counts. Entities with no matches show a clean **"No results found"** state.
